***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 30-67, drawn to a first product, a nucleic acid sequence, the complement of said nucleic acid sequence, alleles of said nucleic acid sequence and its complement, nucleic acid sequences having 70% or more identity, or to said complement or alleles, vectors and host cells comprising said nucleic acid sequence, a cell culture, plant, or composition of matter including said host cell; and a first method, for genetically modifying a cell, comprising using said nucleic acid molecule to transform a cell.

Group II, claim(s) 68, drawn to a second method, for isolating a root specific gene and/or root specific element from a plant.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the use of the first product in transforming a cell in the first method of Group I is not shared with the second method of Group II. The use of nucleic acid sequences for screening in the second method of Group II is not shared with the first method

Art Unit: 1638

of Group I. Further, all nucleic acid sequences can be produced by alternative means, such as chemical synthesis.

Applicants are reminded that different nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

In addition to one of the groups, Applicant is required to select a single nucleotide sequence from SEQ ID NOs: 1-15 for examination. This requirement is not to be construed as a requirement for an election of species, since each nucleotide sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
